Incisor Blocks

Teeth #'s _____
Length of Block _____ mm's
Overbite Desired _____ mm's

Special instructions:

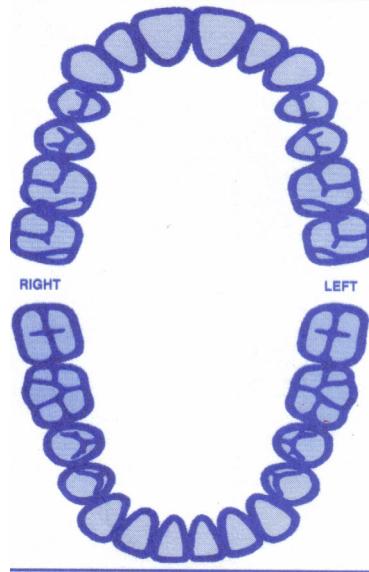

To determine the length of the Incisor Block, have the patient open to the overbite you wish to finish at. Measure patients overjet at this overbite and add 2 mm's. This will be the length of the block. This will allow for adequate length to deter the patient from biting behind the block. The models of the lingual and incisal surfaces must be accurate: free of voids and distortions.

Indirect Bonding U _____ L _____
